\*1: Typical Value, using a cross section of winding wire

\*2: Total Flux of core  $\times$  turn

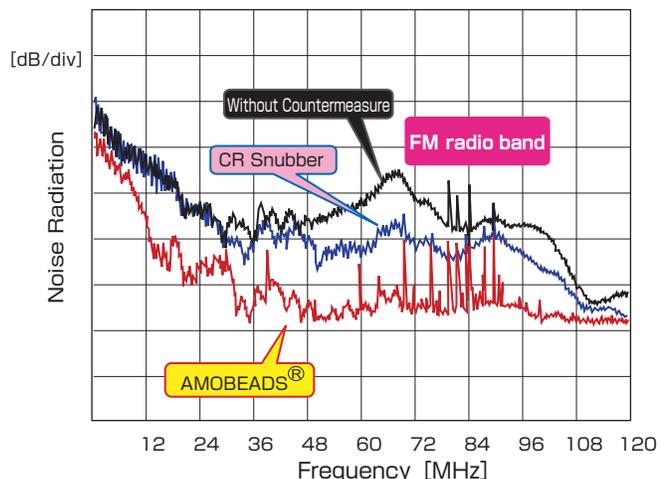

### Example of applied circuit and its characteristic

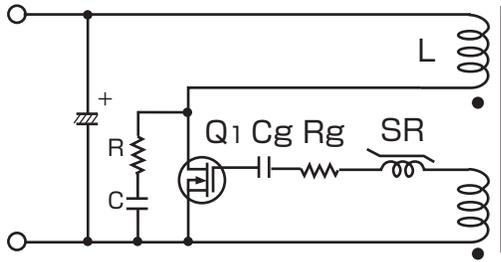

Chopper Converter

| Testing Condition of Radiant Noise Measurement |                     |
|--|---------------------|
| Input  | 20[V]               |
| Output   | 12[V]/2[A]          |
| Frequency                                      | 90kHz               |
| Rectifier                                      | FRD                 |
| Detector                                       | Simple Loop Antenna |

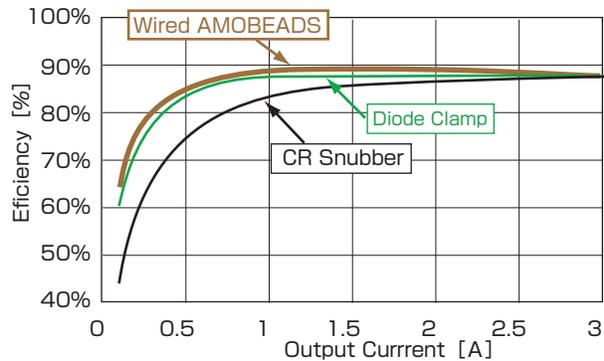

# Examples of Applied Circuits and Effects of Noise Suppression

## Example Circuit : Self-Exting Single Flyback(RCC)

SR : Wired AMOBEADS<sup>®</sup>

JPN.P. No. 3190775 Toshiba Materials Co. Ltd.  
 USP No. 5745353 //

Power Supply Efficiency ( $V_{in}$ :DC140V,  $V_o$ :24V)

## Example of Effects (Delaytor)

Diode Clamp  
 (68k $\Omega$ , 0.022 $\mu$ F)

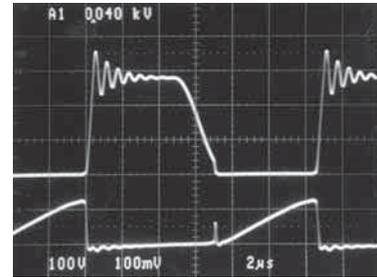

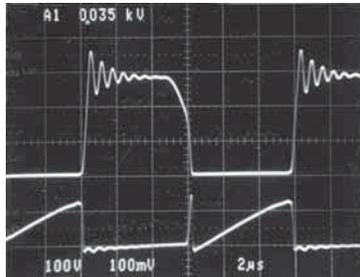

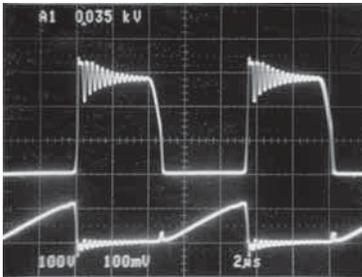

CR Snubber  
 (10 $\Omega$ , 1500pF)

Wired AMOBEADS<sup>®</sup>  
 AB44DY0307 applied

Switching  
 Waveform

Vds  
 100V/div

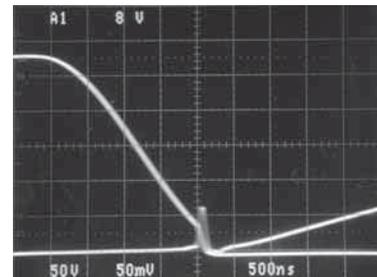

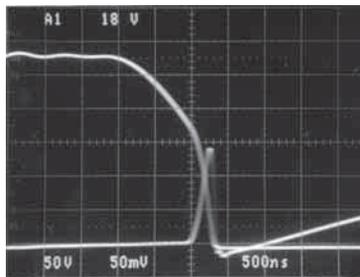

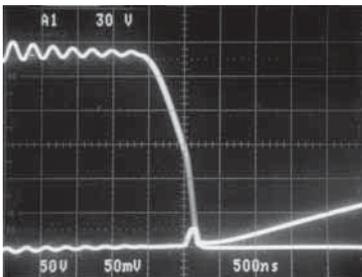

Id  
 1A/div

Turn-on  
 Waveform

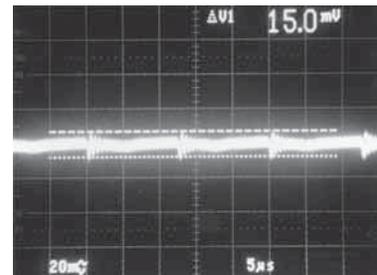

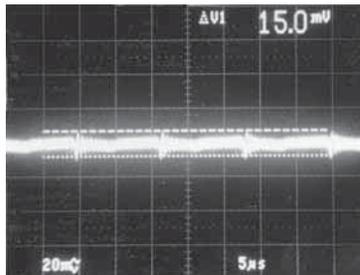

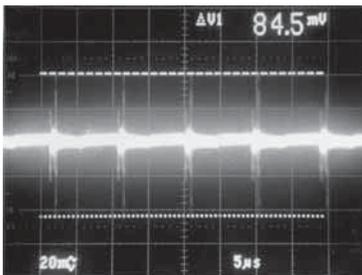

Vds  
 100V/div

Id  
 0.5A/div

Output Voltage  
 Noise

Vn  
 20mV/div

Wired AMOBEADS delay the turn-on time of the MOSFET when they are inserted between the gate of the MOSFET and drive winding on the primary side of the self-extinguishing single flyback (RCC). The wired AMOBEADS reduce both noise, due to surge current and switching loss, by turning on the switching element at the point when the voltage of the transformer becomes low, utilizing the LC resonance phenomenon induced by inductance L of the primary winding of the transformer and a snubber capacitor C.

Note : The diode clamp circuit has a tendency to increase the out put noise.
